

# AGITATION IN B2B MIXER TANKS

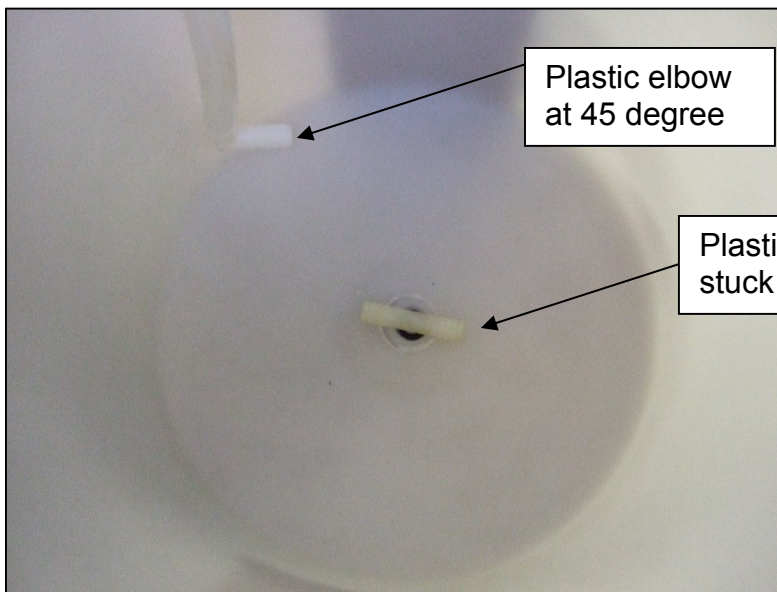

BY BULK SEED SYSTEMS, INC.

Bulk Seed Systems  
20561 Justice Ave.  
Wabasso, MN 56293

Step 1: Place shortest end of plastic tee into suction hole in bottom of mix tank.

Step 2: Make sure plastic elbow at the bottom of agitation line is turned at a 45 degree angle to the sump hole.

**This will ensure the best circulation for agitation during application. By placing the tee into the sump hole the pump will not suck any air into the system until tank gets below ½ gal.**
